

Used Saddle Brands

Erre Plus

sellmysaddle.co.uk

History

This is a story that began in Italy: it originated with Roberto Rasia, founder of Erreplus Saddlery, and what makes it unique is his incredible passion for the equestrian art, with 25 years of experience.

Handcrafted in northern Italy, a region renowned for its top-quality leather, Erreplus saddles are made from premium bull leather for exceptional performance. Designed for modern sport horses, our innovative saddle trees enhance comfort for those with regular or prominent shoulders.

**Interesting fact!*

Synthetic wool is becoming a popular option for European brands. They argue that it's less prone to clumping and therefore less need for a regular full reflock.

Range

The range focuses on Jumping, Eventing & Dressage saddles. All panels are synthetic wool flocked for better adjustability.

The range offers:

- 4 Dressage Saddles
- 8 Jumping Saddles
- 2 Eventing Saddles

With a narrow twist, seat depth options, panel style, flap cut, dual & mono flap suited a competitive riders preferences and well muscled sports horses.

Understanding the panel designs is key to short listing a used Erreplus. They have 3 core panel designs:

Ergonomic panels come with a new tree with a flat profile. This model has been designed and made to fit modern horses with a compact and well-muscled shape and is also recommended for short backs.

Classic panel is recommended for horses with regular shoulders that are fairly narrow, it provides support at the front of the saddle for greater stability.

SL panels have been specially designed, to free muscular and pronounced shoulders.

This short panel completely avoids any kind of pressure at scapular level, ensuring a perfect movement of the shoulders whilst maintaining a large contact area on the horse. Not suitable for horses with prominent withers or with a fine structure

What makes Erreplus different....

Erreplus saddle trees are made of high-quality, fibreglass reinforced synthetic material.

The Erreplus tree has been opened outwards to increase comfort for our modern-built horses. Therefore, the saddles fit horses with regular shoulders and those with prominent shoulders. The nylon material used to make the tree has water absorption of 15%, making it flexible and easier to adapt to horses with a more extreme of the difficult build.

The jumping saddle trees have three openings in the area of the pubic bone and the ischium of the rider. The foam-filled seat thicker in the area of the openings in the tree to guarantee maximum comfort for the rider. To keep Erreplus saddles in place, the twist is narrowed. This will also increase the comfort of the rider.
